

Visit by Teddy Medic and his Team

October 9th 2017

Today KS1 classes were treated to some specialist training by Southampton A&E medical team. The children all brought their poorly teddies and were put through their paces learning the essential basics in when to give CPR. Following an initial talk by Dr Summerhayes, the children were split into groups to take part in smaller first aid activities, including the technique of administering CPR.

Back in class, and with our patients making a full recovery, the children set about designing an essential guide for when to give CPR.

We would all like to say a big thank you to Teddy Medic and his team for the fun we had learning such an important potentially life saving skills.
