## Fisheries visit

*18 May 2015*

On the morning of 18th May 2015, Year 4 children walked from school to the our local fishery to learn all about how the river and fishery are managed. We discovered how the floodplain protects Wellow village, learnt how the river is managed and looked after and why the fishery environment is good for wildlife. We also found out how a fishing rod works and were lucky enough to see a large carp fish be caught. We also learnt a lot about animals by looking at a collection of stuffed ones. Year 4 are learning about rivers in Geography and habitats in Science so it was great to experience the river habitat first hand.

"I really enjoyed looking at the stuffed animals." (Maddie, age 9)

"I learnt about all the animals that lived in fishery. It was really interesting" (Ethan, age 8)

"I discovered how to get rid of blue-green algae" (Flynn, age 9)
