

Last week Year 4 had a fabulous time visiting Testwood Lakes. We learnt how about how the lakes were created, how water is pumped from the River Test to Little Testwood Lake for it to act as a reservoir and compared the River Blackwater and Test. We found lots of river features (tributary, meander, sediment, erosion, deposition etc) and fast and slow flowing parts of the river were tested out by a game of Pooh Sticks. After lunch we found and identified a phenomenal number of different creatures living in the pond (and rivers) and used microscopes. We concluded that the water was very clean as we found lots of Mayfly Nymphs.
